SUBJECT INDEX

[b] = Book Review; [c] = Correspondence; [r] = Report

Aaberg exhaust hoods, fluid mechanics 455–476
Acetone exposure, spray painting 390
Acrylics
  laser welding 185–187
  spray painting 385–394
Aerosol science, nuclear industry 322–323[b]
Aerosols, radioactive 433–434[b]
Air sample analysis, quality assurance 545–561
Air sampling
  cotton dust 349–362
  methyltetrahydrophthalic anhydride 189–197
  personal cf. work area sampling 349–362
  sulphuric acid 655–656
Air sampling instruments
  for carbon black 483–486
  cascade impactors 655–656
  cyclones 1–22, 23–34, 333*(corr.)*, 483–486
  detector tubes 189–197
  field comparisons 23–34, 189–197, 333*(corr.)*
  filter cassettes 655–656
  horizontal elutriators 1–22, 23–34, 333*(corr.)*
  impingers 189–197
  IOM head 483–486
  penetration curves 1–22
  performance 1–22
  respirable dust 1–22, 23–34, 333*(corr.)*
  XAD-2 sorbent tubes cf. midget bubbler 189–197
Airflow
  around fume cupboards 441–453
  around two-dimensional exhaust hoods 455–476
Allergens, airborne, filter elution methods for 575–587
Aluminosilicate fibres, devitrification and biological activity 115–129
Amberlite XAD-2 solid sorbent sampling tubes 189–197
Analysis
  air samples, quality assurance 545–561
  methyltetrahydrophthalic anhydride 189–197
  standardization of methods 344
Animal studies, sheep 519–530
Aromatic amines, occupational hygiene in design of plant 601–607
Arsenic
  determination in urine 511
  exposure in joinery shops 509–517
Asbestos
  analysis of air samples, SEM cf. TEM 265–269
  bodies 271–282
  Canadian 155–171
  chrysotile 155–171
  crocidolite 155–171
  exposure cf. sputum body count 271–282
  fibre counting, interlaboratory exchange schemes 59–69
  fibre release from friction products 173–181
  fibre size classification, bulk samples 155–171
  fibre-counting rules 158–161
  NIEHS 155–171
  non-fibrous particle size 165–166
  review 699[b]
  substitutes, friction products 173–181
  UICC 155–171
Asbestos Fibre Regular Informal Counting Arrangement (AFRICA) scheme 59–69
Asbestosis, ferruginous body count 271–282

Back injury, and ergonomics 103–105[b]
Benzene exposure
  in land reclamation 307–315
  in spray painting 390
Biological monitoring
  arsenic 511–516
  pyrene exposure in carbon black manufacture 681–688
Biological variability, pharmacokinetic models of 295–306
Boundary element method, for airflow modelling 441–453
Brassware workers, chronic bronchitis in 283–293
British Agrochemical Association, spray operator exposure study 589–599
British Cast Iron Research Association (BCIRA) cyclone sampler, field comparison 23–34, 333*(corr.)*
British Medical Research Council (BMRC), respirable dust definition 1–22
British Occupational Hygiene Society (BOHS)
  1990 Conference 35–46, 211–215[r]
  1992 Conference 669–674, 675–680
  President 1991–1992: T.L. OGDEN 112–113
  Special Interest Groups
    Occupational Hygiene Information Systems 79–98

Quality of the Indoor Environment 324–326[b]
British Standards Institution, fume cupboards standard 239–252, 395–405, 700*(corr.)*
Bronchitis, in brassware workers 283–293
Building-related illnesses 323–324[b]
Bulb farming, pesticide exposure in 373–384
Butanol exposure in spray painting 390
Butoxyethanol exposure in spray painting 390
Butyl acetate exposure in spray painting 390

Car body repair shops, solvent exposure in 385–394
Carbon black, occupational exposure during manufacture of 363–372, 477–496
Carbon black exposure, bioavailability of PNAs 681–688
Carbon dioxide, laser welding hazards 183–188
Carbon fibres, workplace levels 145–153
Carbon monoxide exposure, in carbon black manufacture 363–372
Carcinogens
  occupational hygiene in design of plant 601–607
  reference guide 566[b]
Cascade impactors 655–656
Chemicals
  control and measurement of hazards 326–327[b]
  European legislation 339–344
  in agriculture 222–223[b]
  multiple exposure 101[b], 131–143
  occupational health 223–224[b]
  occupational hygiene in design of plant 601–607
  volatile, substitution of 637–652
Chlorobenzenes, toxicity 696–697[b]
Chromium VI exposure
  in joinery shops 509–517
  in laser welding 185–187
Civil service, occupational health in 224–225[b]
Classification, Packaging and Labelling Regulations 1984 225–226[b]
Cobalt, exposure in hard metal industry 497–507
Compensation, hearing loss evaluation for 199–209
Computational model, particle emission from machinery 407–424
Computer-aided design of chemicals 637–652
Computer-assisted digitized sizing, asbestos fibres 155–171
Computers, effect on employment of disabled 565–566[b]
Construction, occupational health and safety in 211–215[r], 434–435[b], 689–691[b]
Contaminated land development, health and safety 434–435[b]
Control of Substances Hazardous to Health Regulations 1988 (COSHH)
  implementation in the construction industry 211–215[r]
  risk assessment programme 71–78
Copper exposure in joinery shops 509–517
Cotton dust
  personal cf. work area sampling 349–362
  vacuum cleaners for 35–46
Cristobalite, from heated ceramic fibres 115–129
Cyclohexane exposure during land reclamation 307–315
Cyclone samplers, underground comparison 23–34, 333*(corr.)*

Databases, occupational exposure 79–98
Decane, exposure during oil refinery land reclamation 307–315
Detector tubes 189–197
Disability, employment and new technology 565–566[b]
Dithiocarbamate exposure, in bulb farming 373–384
Dorr-Oliver nylon cyclone samplers, field comparison 23–34, 333*(corr.)*
Dust control, cotton 35–46

Energy dispersive X-ray spectroscopy (EDXS), identification of airborne MMVF fibres 609–627
Energy-saving measures, effect on air quality in welding 531–543
Environmental health criteria
  chlorobenzenes 696–697[b]
  mycotoxins 110–101[b]
  nickel 570–571[b]
  platinum 695[b]
Environmental monitoring data, standard proforma 79–98
Environmental tobacco smoke 325–326[b]
Ergonomics
  and safety, conference proceedings 103–105[b]
  in laser welding 186–188
Ergot, environmental health criteria 110–101[b]
Ethanol exposure in spray painting 390
Ethyl acetate exposure in spray painting 390
Ethylbenzene exposure during land reclamation 307–315
European Committee for Standardisation (CEN) 678
European Communities, occupational health and hygiene in 669–674, 675–680
European Year of Safety, Hygiene and Health Protection at Work 107–108[r], 345
Exposure assessment 219–221[b]
Exposure data, standard format for 79–98
Exposure limits
  'hot' particles on skin 102–103[b]

See also Occupational exposure limits
Eye protection, laser welding 187

Ferruginous bodies, index of mineral fibre exposure 271–282
Fibre evaluation, WHO/EURO method 609–627
Fibreglass industry
  airborne fibre levels in 609–627
  styrene exposure in 45–57
Fibres
  aluminosilicate 115–129
  carbon 145–153
  ceramic 115–129
  silicon carbide, lung clearance 519–530
  surface properties 115–129
  See also Asbestos; MMVF
Filters
  cellulose ester 23–34, 333*(corr.)*
  elution methods 575–587
  glass fibre 575–587
  PTFE 575–587
  PVC 23–34, 333*(corr.)*
  respiratory, for radon 629–639
  silver membrane 23–34, 333*(corr.)*
  underground sampling, comparison 23–34, 333*(corr.)*
  variability, asbestos fibre evaluation 162–163
FLUENT CFD software package, particle emission from machinery 407–424
Friction products, dust release from 173–181
Fume cupboards
  airflow around workers 441–453
  containment testing 239–252, 395–405, 700*(corr.)*

Gloves
  effectiveness against pesticides 375–383
  use in spray painting 389
Grinding, dust and metal exposure in 497–507

Hard metal industry, dust and metal exposure in 497–507
Health care workers, occupational health 102[b]
Health and Safety Commission (HSC)
  annual report 567–568[b]
  plan of work 568–569[b]
Health and Safety Executive (HSE)
  National Exposure Database 82
  WASP quality assurance 545–561
Hearing loss evaluation for compensation 199–209
Heptane exposure in land reclamation 307–315
Hexane exposure
  in land reclamation 307–315
  in spray painting 390
Hospital workers, occupational health 102[b]
Hydrocarbon exposure
  in land reclamation 307–315
  in spray painting 390
Hydroxypyrene, as index of pyrene exposure 681–688

Indoor air quality
  House of Commons paper 324–326[b]
  measurement 571[b]
  review 323–324[b]
Inter-laboratory sample exchanges, quality assurance 545–561
International Labour Organisation, International Classification of Radiographs of Pneumoconioses 1980 cf. Japanese Classification 425–431
International Occupational Hygiene Association (IOHA) 670–673
International Organisation for Standardization (ISO), alveolar sampling convention 1–22
IOM total inhalable sampling head 483–486

Japanese Classification of Radiographs of Pneumoconioses, cf. ILO 1980 Classification 425–431
Joinery shops, exposure to wood preservatives 509–517

Kevlar, fibre release from friction products 173–181

Labelling, dangerous substances 225–226[b]
Laboratories, academic, safety in 320–321[b]
Land reclamation, oil refinery, airborne hydrocarbons 307–315
Lasers
  safety 697[b]
  welding hazards 183–188
Legislation, European occupational health and safety 337–347
Lighting, textbook 436–437[b]
Lung clearance, silicon carbide, sheep model 519–530

Machinery
  assessment of particle emission 407–424
  safety 221–222[b]
Man-made vitreous fibres (MMVF)
  airborne fibre levels in production 609–627
  continuous filament 609–627
  devitrification and biological activity 115–129
  exposure cf. sputum body count 271–282
  fibre identification 609–627
  fibreglass industry 45–57, 609–627
  surface properties 115–129
Maneb exposure, in bulb farming 373–384
Marple personal cascade impactors 655–656
Membrane filters, for wood preservatives 510
Mesothelioma, ferruginous body count 271–282
Methyl ethyl ketone exposure in spray painting 390

Methyl isobutyl ketone exposure in spray painting 390
Methyltetrahydrophthalic anhydride (MTHPA), air sampling and analysis 189–197
Midget bubblers 189–197
Mining, dust samplers for 23–34, 333*(corr.)*
MRE 113A sampler
  field comparison 23–34, 333*(corr.)*
  performance calculation 1–22
Mullite, from heated ceramic fibres 115–129
Multiple chemical sensitivity 101[b]
Multiple exposure, model 131–143
Mycotoxins, environmental health criteria 110–101[b]

National Vocational Qualifications (NVQs), occupational hygiene 663–668
Nickel
  environmental health 570–571[b]
  exposure in hard metal industry 497–507
Nitro compounds, occupational hygiene in design of plant 601–607
Noise-induced hearing loss (NIHL), evaluation for compensation 199–209
Non-verbal communication, and ergonomics 103–105[b]
Nonane, exposure during oil refinery land reclamation 307–315
Nuclear industry, aerosol science applications 322–323[b]

Obituary: Klaus Robock 439
Occupational environment, psychosocial 217–219[b]
Occupational exposure
  indices 131–143
  measurement 342–344, 545–561
  modelling of variability 131–143, 295–306
  standard format for data 79–98
  to mixtures 131–143
Occupational exposure limits
  15 countries 99–110[b]
  criteria documents 341–342, 691–694[b]
  HSE guidance note 563–564[b]
Occupational health
  agrochemicals 222–223[b]
  chemical industry 223–224[b]
  civil service 224–225[b]
  construction industry 211–215[r]
  European disease statistics 321–322[b]
  European legislation 337–347
  health care workers 102[b]
  risk assessment programme 71–78
Occupational health and safety
  in construction 689–691[b]
  European Community and 675–680
  qualifications 663–668
Occupational Health and Safety Lead Body (OHSLB) 663–668
Occupational hygiene
  in the civil service 224–225[b]
  in design of chemical plant 601–607
  in Europe 669–674, 675–680
  general principles 319–320[b]
  surveys, implementation of recommendations 229–238
Occupational safety
  in academic laboratories 320–321[b]
  agrochemicals 222–223[b]
  construction industry 211–215[r]
  ergonomics and 103–105[b]
  European accident rates 321–322[b]
  European legislation 337–347
  textile finishing plant and machinery 221–222[b]
Ochratoxins, environmental health criteria 110–101[b]
Octane exposure in land reclamation 307–315
Offices, pollution in 323–324[b] 270
Oil refineries, land reclamation, airborne hydrocarbons 307–315
Optical radiation exposure, laser welding 184–187

Patents, discontinuation of Annals abstracts 317[c]
Pesticide exposure
  in bulb farming 373–384
  in joinery shops 511
  skin, in crop spraying 589–599
Pharmacokinetic models, biological variability and 295–306
Platinum, environmental health criteria 695[b]
Pneumoconioses
  carborundum, sheep model 519–530
  standard radiographs, Japanese cf. ILO 1980 425–431
Polynuclear aromatic hydrocarbons, biological monitoring 681–688
Psychosocial work environment 217–219[b]
Pyrene exposure, biological monitoring 681–688

Quality assurance, chemical analysis of air samples 545–561
Quartz, airborne, in silicon carbide manufacture 145–153

Radiation protection 102–103[b], 435–436[b], 698[b], 698–699[b]
Radioactivity, airborne 433–434[b]
Radon
  in indoor environments 325[b]
  respirator filter efficiency 629–639
Rat urine, airborne, measurement methods 575–587
Regular Interlaboratory Counting Exchange (RICE) scheme 59–69
Respirable dust samplers 1–22
Respiratory protective equipment
  filter efficiency 629–639
  radon 629–639
Risk assessment, management of 71–78

Scanning electron microscopy (SEM)
asbestos fibre classification 155–171
cf. TEM 265–269
identification of airborne MMVF fibres 609–627
silicon carbide 521–525
Scottish Vocational Qualifications (SVQs), occupational hygiene 663–668
Sigma-Scan computer-driven digitizing tablet 158–161
Silicon carbide
dust levels in production 145–153
lung clearance, sheep model 519–530
SIMPEDS cyclones 1–22, 23–34, 333*(corr.)*, 483–486
Skin
exposure limits for 'hot' particles on skin 102–103*b*
pesticide exposure in crop spraying 589–599
radiation protection dosimetry 698–699*b*
Social aspects of work environment 217–219*b*
Solvents, multiple exposure model 131–143
Spray painting, solvent exposure in 385–394
Standards
european, hygiene 678
fume cupboards 239–252, 395–405
Statistics, occupational accidents and diseases in Europe 321–322*b*
Styrene exposure, health hazard 45–57
SUBFAC index, for volatile substances 637–652
Substitution, of volatile chemicals 637–652
SUBTEC software package, calcualtion of product properties 637–652
Sulphur dioxide exposure
carbon black manufacture 363–372
in titanium dioxide manufacture 653–661
Sulphur hexafluoride, test gas for fume cupboards 239–252, 395–405, 700*(corr.)*
Sulphuric acid exposure, in titanium dioxide manufacture 653–661
Surveys, implementation of recommendations 229–238

Technology, effect on employment of disabled 565–566*b*
Textile finishing, plant and machinery safety 221–222*b*
Titanium dioxide, occupational exposure in manufacture 653–661
Toluene exposure
in land reclamation 307–315
in spray painting 390
Toxicology, general principles 319–320*b*
Training, occupational health and safety 663–668
Transmission electron microscopy (TEM)
cf. SEM 265–269
silicon carbide 521–525
Trichothecenes, environmental health criteria 110–101*b*
Trimethyl benzene exposure
in land reclamation 307–315
in spray painting 390

UNIFAC model, for activity coefficients of chemicals 637–652

Vacuum cleaners for cotton dust 35–46
Ventilation
energy saving measures and air quality 531–543
exhaust hoods 455–476
and indoor pollution 323–324*b*
Vibration exposure, health risk models 253–264

Welding
carbon dioxide laser, hazards 183–188
effect of energy saving measures on air quality 531–543
WHO/EURO MMVF fibre evaluation method 609–627
Wood preservatives, occupational exposure in joinery shops 511
Work-related upper limb disorders, and ergonomics 103–105*b*
Workplace Analysis Scheme for Proficiency (WASP) 545–561
World Health Organization, role in development of occupational hygiene 670–672

Xylene exposure
in land reclamation 307–315
in spray painting 390

Zineb exposure, in bulb farming 373–384
Zirconia, from heated ceramic fibres 115–129
